Robotics for a social future

With today's technology-based economy and the emergence of robots, not just in the workplace, but in our homes, Emotion Robotics is pleased to present NAO, the most advanced commercially available social robot.

NAO, from Aldebaran Robotics, represents the leading hardware and software platform for investigating and learning about social robotics. Whether you are a developer, parent or just an interested hobbyist, NAO provides a state-of-the-art experience.

Available with prebuilt applications, an 'App Store' and programming tools from simple 'drag and drop' through to Java, Python and C++ SDKs, NAO delivers everything you need today and will need in the future.

Emotion Robotics is here to help and guide you to your goal, be it with training, support or bespoke development services. As a founding member of the UK NAO User Group, Emotion Robotics is instrumental in providing educational events, conferences and social events such as hackathons based on the NAO platform.

What are you waiting for? Robotics is evolving, so join the evolution.
