Robotics for a social future

Do you want an engaging and interactive classroom experience for children of all ages? Emotion Robotics' NAO robot solutions can provide just that.

Whether you are teaching basic skills to infant school children or programming and engineering to secondary school and university students, we help teachers and education professionals to create the perfect robotic teaching solution for all learning environments.

STEM subjects (science, technology, engineering, and maths) are brought to life with this visceral, highly interactive learning experience. NAO is especially successful when used to engage children with special learning challenges, such as autism.

Although ready to use, NAO is also fully programmable, and we at Emotion Robotics are the UK's leading provider of bespoke solutions for your specialist needs. Our experience in both special needs and standard educational environments has been reinforced by our involvement in the development of the Aldebaran Assist Kids with Robots system (ASK NAO).

Talk to us about how we can help you create a future learning experience today.
